7. COVID-19 is a respiratory disease that can result in serious illness or death, is caused by SARSCoV-2 virus, which is a new strain of coronavirus that had not been previously identified in humans and can easily spread from person to person. The virus is spread between individuals who are in close contact with each other (within about six feet) through respiratory droplets produced when an infected person coughs or sneezes. It may be possible that individuals can get COVID-19 by touching their own mouth, nose or eyes.

Compliance with our COVID-19 safety guide is expected.
